About us

AKSHO: Agricultural Knowledge Synthesis and Modelling Research Cluster

The Agricultural Knowledge Synthesis and Modelling (AKSHO) Research Cluster focuses on studying the interface between animal science and mathematics, statistics and computer science in order to advance quantitative understanding regarding animal agriculture. The program covers modelling of all terrestrial domesticated animals such as beef cattle, dairy cattle, buffalo, sheep, goat, and poultry. Our primary instruments to study the above research are meta-analysis, machine learning, mechanistic modeling, and system dynamics.

If you wish to be part of AKSHO please do not hesitate to contact me at email address anuraga.jayanegara@gmail.com.
