Tropical Landscape Management

Degree Master & Doctor Program
Credit 3 (3-0)
Semester Odd
University Awaji Landscape Planning & Horticulture Academy - Japan

This is an introductory course covering the principle of landscape ecology in the tropic and practices of using tropical plants. Emphasis is on the interaction between environmental factors and utilization, maintenance and management of landscape elements, e.g. some cases of watershed based Indonesian home gardens (pekarangan), mixed gardens (kebun campuran), forest gardens (kebun talun) in agroforestry system practices; agrotourism and ecotourism. Students completing this course gain understanding of problem solving in the tropical landscape problem, e.g. land use and land cover changing and urbanization.
