Healthy Food Tip

Most of your salad dressings are the same - olive oil, balsamic, salt and pepper. Are
there other low fat, delicious, healthy options?

We like using those ingredients as a basis for salad dressings. From there, you can add other ingredients to add variety. We like to experiment, and basically make a salad dressing that suits our tastes at the moment, mixing and matching oftentimes from ingredients we have in the kitchen.

For example, if we want a dressing with a creamy texture, we'll add a little low-fat yogurt and some water. Or we'll blend a little avocado with some water and add that to the basic recipe as this not only gives it an good texture but a rich flavor. These ingredients will give you a creamy dressing without the added fat of traditional regular creamy dressings.

We'll also sometimes add herbs and spices. Fresh herbs are best when we have them on hand. Depending upon the flavor profile we want, we'll add ones like oregano, thyme or marjoram (for Italian) or cilantro (for Asian).

Other ingredients we like to add to some of our dressings include lemon juice, cranberry juice concentrate, Dijon mustard, and ground pumpkin or sunflower seeds.

As you can see, you can really be creative when it comes to making delicious salad dressing that are low in calories and really good for you.
