Ancient well collecting rain water in Brolo Square Park. The floor area of the Brolo square was the water reservoir. The water was flowing into the cistern and remains of this function are two sculptured fountains.

Piran Cliffs, is the most distinctive natural feature of flysch cliffs's Slovenian coast. The bottom part of the cliffs is exposed to constant erosion (abrasion) by the sea, while the upper parts are composed mostly by the changing weather conditions. At the foot of the cliffs, a characteristic single terrace has formed between the steep slope and the sea, which in places is up to seven meters wide. Under the cliffs is a constant stone-fall hazard.

Vine processing plant at the Rodica organic farm. The winery is family estate located in the hinterland of Slovenian Istria, in the village of Truske, which is just above Marezige and 12 km from the town of Koper.

Farmland in Kostabona is typical the so-called mixed culture (cultura mista) were typical the Mediterranean area. It means that vine grew on the same field as others cultures, or fruit trees were planted vineyards, and the combination of olive trees and vines was also frequent.

Kostabona village has been settled since prehistoric times, there was also roman fort and shrine here. Typical of the Mediterranean world in general, and of Koper hinterland as well, are terraced slopes. The farming activities depending on the European wine-and oil markets, than the land use changing was very dynamic process.

Piazza Tito, center of Koper. Koper is town in northeastern part of the Adriatic Sea with history dating back to Roman times. The Piazza is one of the most beautiful Venetian squares of the entire Adriatic region and the cathedral which frames the square has numerous architectural styles.

Vineyard in Koper hinterland. The site is study area for soil erosion and sediment production erosion plots were installed. The farming activities depending on the European wine-and oil markets, than the land use changing was very dynamic process.

Typical of the Mediterranean world in general, and of Koper hinterland as well, are terraced slopes. The farming activities depending on the European wine-and oil markets, than the land use changing was very dynamic process.
Tartini square of Piran. The coastal town of Piran is situated on the Piran peninsula and located near the Gulf of Piran.
