RouteFlow Installation on Ubuntu 12.04

In order to install OpenFlow Controller, you have two alternatives: NOX and POX. When using POX, you don't have to confuse about installation in Ubuntu 12.04, because it runs directly. But not for NOX. Here's a tutorial written by Brent Salisbury which may help you out from the problem:

Verify

$ cd src $ pwd /home/brent/nox/build/src $ ./nox_core -v $ ./nox_core -h $ ./nox_core -i ptcp:6633

Or you can build from https://github.com/CPqD/RouteFlow
