Read more  Mangrove Forests can Reduce the Impacts of tsunami January 25, 2011

Dense mangrove forest of about 200 meters, with density 30 trees of 15 centimeters diameter per 100 square meters can help reduce 50 percent the devastating impact of tsunamis and coastal storms by absorbing some of the waves' energy. This was stated by the Director General of Watershed Management and Social Forestry Ministry of Forestry Dr. Ir. Harry Santoso in the National Seminar on the Planting of 3000 Tree with theme 'Preservation of Mangrove Ecosystems in Creating Sustainability of Forests', Saturday, 22 January 2011, at Darmaga Campus.
