Laboratory Manual for Physiological Studies of Rice

This manual is primarily intended for students of crop physiology and agronomy. The procedures given in the text of this manual are particularly suited for routine chemical analysis and physiological studies of the rice plant. Considerable attention is given to technical matters involved in these procedures. The equipment section of each chapter lists only special items needed for the procedures discussed. Ordinary laboratory equipment is not listed.

CONTENTS
Chapter 1 Sampling and sample preparation
Chapter 2 General directions for chemical analysis of rice tissues
Chapter 3 Analysis for total nitrogen (organic nitrogen) in plant tissues
Chapter 4 Procedures for routine analysis of phosphorus, iron, manganese, aluminum, and crude silica in plant tissue
Chapter 5 An EDTA method for routine determination of calcium and magnesium in plant tissue and soil solution
Chapter 6 Procedures for routine analysis of zinc, copper, manganese, calcium, magnesium, potassium, and sodium by atomic absorption spectrophotometry and flame photometry
Chapter 7 Dithizone test for heavy metals in solution
Chapter 8 Analysis of boron in plant tissue and water
Chapter 9 Determination of chlorine in plant tissue
Chapter 10 Determination of chlorophyll in plant tissue
Chapter 11 Determination of sugar and starch in plant tissue
Chapter 12 Determination of total 14 C in plant tissue
Chapter 13 Determination of 14 C-labelled sugar in plant tissue
Chapter 14 Determination of 14 C-labelled starch in plant tissue
Chapter 15 Assimilation of 14 CO 2 by intact plants in the field
Chapter 16 The safranin-phenol method for detection of silicified cells in rice tissues
Chapter 17 Routine procedures for growing rice plants in culture solution
Chapter 18 Measurement of light intensity and light transmission ratio
